SUMMARY

Software Developer with hands-on experience building and delivering full-stack web applications, business automation systems, and production-ready software. Built a paid WhatsApp outreach dashboard for a real client and a multi-tenant SaaS platform, working from requirements through implementation, testing, and deployment across frontend, backend, databases, and APIs.

Focused on practical problem-solving and maintainable software using TypeScript, React, Node.js/Express, PostgreSQL, REST APIs, Docker, and Linux/cloud deployment, with AI-assisted development used as part of validated engineering workflows.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+)
- **Frontend:** React, Vite, Tailwind CSS, responsive and RTL interfaces
- **Backend & APIs:** Node.js, Express.js, REST APIs, OpenAPI, webhooks, Meta WhatsApp Cloud API
- **Data:** PostgreSQL, Prisma ORM, SQL, relational database design, migrations
- **Testing:** Vitest, Supertest, React Testing Library, Playwright, API integration and end-to-end testing
- **DevOps & Tools:** Git, GitHub, Docker, Docker Compose, Linux VPS, Cloudflare Pages/DNS/R2, Vercel, GitHub Actions, Postman
- **Engineering:** Authentication and authorization, multi-tenancy, API validation, transactional workflows, scheduled automation
- **AI-Assisted Development:** Coding agents for planning, implementation, debugging, testing, review, and documentation, with manual and automated verification

EXPERIENCE

Freelance Software Developer — WhatsApp Outreach Dashboard | *2026 · Paid Client Project*

GitHub | **Tech:** React · TypeScript · Node.js · Express · PostgreSQL · Prisma · Meta WhatsApp Cloud API · Webhooks · Linux VPS

- Built and deployed a full-stack WhatsApp outreach dashboard that lets the client import contacts, create campaigns, send messages, manage conversations, and automate follow-ups through the official Meta WhatsApp Cloud API.
- Implemented CSV/Excel lead import, inbound webhooks, CRM-style conversations, scheduled follow-up automation, and stop-on-human-reply behavior backed by PostgreSQL.
- Worked directly with the client to gather requirements, define the project scope and contract, iterate from feedback, validate messaging with real phone numbers, and deploy the completed system to the client's VPS within an 8-day delivery cycle.

PROJECTS

Markab — Multi-Tenant Vehicle Rental Management SaaS

GitHub | **Tech:** React · TypeScript · Node.js · Express · PostgreSQL · Prisma · OpenAPI · Docker

- Built a production-ready B2B SaaS for vehicle rental businesses to manage customers, vehicles, rental lifecycle operations, payments, maintenance, expenses, tasks, dashboards, reports, and analytics.
- Designed organization-level tenant isolation, role-based access, validation, transactional workflows, and a contract-first OpenAPI architecture with generated clients and schemas across frontend and backend.
- Maintained automated API, frontend, and end-to-end regression coverage while handling deployment-oriented concerns including Docker, Linux VPS hosting, Cloudflare, database migrations, CORS, mobile QA, and application reliability.

Content OS — AI-Assisted Content Production & Rendering System

GitHub | **Tech:** React · TypeScript · Vite · Playwright · JSON-based Content Workflows

- Built an AI-assisted content production system with structured workflows, reusable renderer models and layouts, and a React/TypeScript Studio for reviewing and editing carousel output.
- Implemented deterministic PNG, PDF, and ZIP export workflows, including an automated Playwright capture pipeline and render-integrity checks.
- Separated content lifecycle, renderer, workspace data, export tooling, and documentation into clear modules so content and presentation can evolve independently.

EDUCATION

Jinan University — Tripoli, Lebanon

- **Bachelor of Science in Computer Science** | Second-Year Student · Expected Graduation: June 2028

LANGUAGES

Arabic: Native | **English:** Good working proficiency
